

Subject Index.

	PAGE.
Acetone from fermentation of Mahua flowers	84
Acetone-producing organisms—study of	71
Acetylanacardol	135
Acid from hydrolysis of <i>Boswellia serrata</i> gum	240
Acids, carboxylic—Esterification constants of	89
Acids, fatty—From argemone oil	30
Acids, fatty—Preparation of	97
Acids, hydroxy—From argemone oil	33
Acids, phenolic—From marking-nut oil	136
<i>Acorus calamus</i> —Oil from root of	149
Activated sludge—Decomposition of refuse by	255
Adipic Acid—Esterification constant of	89
Ajowan cake as fertiliser...	245
Alcohol—Dehydration of...	49
Alcohol, perillic—From kachi-grass ...	18
Alcohols of the formula, $C_{15}H_{24}O$, from <i>Cyperus rotundus</i>	44
Allylacetic acid—Esterification constant of	89
Amides of $\alpha\beta$ -unsaturated acids—Hydrolysis of	55
<i>iso</i> Amylacetic acid—Esterification constant of	89
Anacardol, $C_{18}H_{30}O$, from marking-nut oil	133
<i>Anethum sowa</i> —Oil from...	183
Anthraquinone as catalyst in hydrocarbon-oxidation	3
Argemone oil—Analytical data for ...	30
Aromatic hydrocarbons—Photochemical oxidation of	1
Bode grass oil—Analytical data for ...	146
Borneol from fennel oil ...	186
<i>Boswellia serrata</i> —Gum-enzymes of ...	221
Botha grass oil—Analytical data for...	146
Brassicidic acid—Esterification constant of	89
<i>Butca frondosa</i> —Absence of enzymes in gum of ...	222
<i>iso</i> Butylacetic acid—Esterification constant of	89
<i>n</i> -Butyramide—Hydrolysis of	56
Calamus root—Oil from ...	149
<i>Callitris rhomboidea</i> —Oil from	144
Camphor-content in trees of varied origin	168
Camphor, hydroxy—Constitution of	267
Camphor-oils—Physical constants of	173
Camphorquinone—Reduction of	270
Camphor-tree—Oils from parts of	163

	PAGE.
Camphoryl hydrogen phthalates	272
<i>n</i> -Caproic acid—Esterification constant of	89
Cardamom oil—Analytical data for	158
<i>d</i> - Δ^3 - Carene from <i>Pinus sylvestris</i> and <i>P. Pumilio</i>	291
Catechol from marking-nut oil	136
Cinnamide—Hydrolysis of	56
<i>Cinnamomum camphora</i> —Oils from	160
<i>Citrus bigaradia</i> —Oil from	178
<i>Cochlospermum gossypium</i> —Absence of enzymes in gum from	222
Coriander oil—Analytical data for	182
Crotonamide—Hydrolysis of	56
<i>Cubeba officinalis</i> —Oil from	159
Cubeb's oil—Analytical data for	159
Cumin oil—Analytical data for	183
<i>Curcuma zedoaria</i> —Oil from	154
Cus-cus root—Oil from	147
Cymbopogon grasses—Classification of	9
Cymbopogon oils—Analytical data for	146
<i>Cyperus rotundus</i> —Oil from... ..	39
Decoic acid—Esterification constant of	89
Dehydration of rectified spirit	49
Diastatic enzymes in gums	233
Dill Oil—Analytical data for	184
Dimethylaniline—Action on cinnamic ester dibromides	195
Dipentene from kachi-grass oil	20
Di- <i>n</i> -propylacetic acid—Esterification constant of	89
<i>Elettaria Cardamomum</i> —Oil from	155
Enzymes from gums	221
Erucic acid—Esterification constant of	89
Essential oils—Notes on some Indian	143
Esterification—Studies in	89
Ethyl- <i>n</i> -butylacetic acid—Esterification constant of	89
Fatty acids—Preparation of substituted	97
Fenchone from fennel oil	186
Fennel oil—Analytical data for	185
Fertilising value of ajowan and mohua cakes	245
<i>Foeniculum panmorium</i> —Oil from	184
Galactose from <i>Boswellia serrata</i> gum	243
α - <i>cyclo</i> Geranic acid—Esterification constant of	89
β - <i>cyclo</i> Geranic acid—Esterification constant of	89
Geraniol from kachi-grass	17
Ginger oil—Analytical data for	153
Glycerides from argemone oil	33
Grass—Constituents of kachi-	17
Grasses—Analytical data for Bode, Botha and Inchi	146

	PAGE.
Grasses—Classification of Cymbopogon	9
Gum arabic—Enzymes of	227
Gum-enzymes of <i>Boswellia serrata</i>	221
<i>bicyclo</i> Heptanecarboxylic acid—Esterification constant of	89
<i>cyclo</i> Heptanecarboxylic acid—Esterification constant of	89
Hexahydro- <i>m</i> -toluic acid—Esterification constant of	89
Hexahydro- <i>p</i> -toluic acid—Esterification constant of	89
<i>cyclo</i> Hexeneacetic acid—Esterification constant of	89
Δ^2 - <i>cyclo</i> Hexeneacetic acid—Esterification constant of	89
<i>cyclo</i> Hexylacetic acid—Esterification constant of	89
<i>cyclo</i> Hexylideneacetic acid—Esterification constant of	89
β - <i>cyclo</i> Hexylpropionic acid—Esterification constant of	89
Hydrocarbons, aromatic—Photochemical oxidation of	1
Hydrocinnamamide—Hydrolysis of	63
Hydrocinnamic acid—Esterification constant of	89
Hydrogenation of argemone oil	31
Hydrolysis of amides	55
Inchi-grass oil—Analytical data for	146
Kachi-grass oil—Constituents of	17
Lauric acid—Esterification constant of	89
Lauric acid from <i>Pinus sylvestris</i>	292
<i>l</i> -Limonene from kachi-grass oil	20
Linolenic acid from argemone oil	37
Linolic acid from argemone oil	37
Mahua flowers—Fermentation of, for acetone	84
Manganese in gums	232
Marking-nut—Constituents of	129
Methoxycamphor—Rotation of	271
<i>p</i> -Methoxycinnamic acid—Bromo-derivatives of	189
<i>p</i> -Methoxycinnamic acid— β -Bromo-	210
<i>p</i> -Methoxycinnamic esters— α -Bromo-	191
<i>p</i> -Methoxyphenylacetylene tetrabromide	211
<i>p</i> -Methoxyphenylpropionic acid—Addition of HBr to	206
<i>p</i> -Methoxy- β -phenylpropionic acid— $\alpha\alpha\beta$ -Tribromo-	191
<i>p</i> -Methoxy- β -phenylpropionic acid— $\alpha\alpha\beta$ -2-Tetrabromo-	203
<i>p</i> -Methoxystyrene	216
Methylallylacetic acid—Esterification constant of	89
Methyl anisyl ketone <i>p</i> -bromophenylhydrazone	213
Methylbenzylacetic acid—Esterification constant of	89
Methylisobutylacetic acid—Esterification constant of	89
<i>p</i> -Methylcyclohexeneacetic acid—Esterification constant of	89
<i>p</i> -Methylcyclohexylacetic acid—Esterification constant of	89
<i>p</i> -Methylcyclohexylideneacetic acid—Esterification constant of	89
Methylisopropylacetic acid—Esterification constant of	89
Methyl- <i>n</i> -propylacetic acid—Esterification constant of	89

	PAGE.
Mohua-cake as fertiliser	247
<i>Moringa pterigospermum</i> —Absence of enzymes in gum of	222
Myristic acid—Esterification constant of	89
Myristic acid from <i>Pinus sylvestris</i>	292
Myrrh—Enzymes from	222
Nitrification of refuse by activated sludge	259
Nonoic acid—Esterification constant of	89
Oil—argemone, analysis of	30
Oil from <i>Anethum sowa</i>	184
„ Botha and Bode grasses	146
„ calamus roots	150
„ <i>Callitris rhomboidea</i>	144
„ camphor trees	160
„ cardamoms	156
„ <i>Coriandrum sativum</i>	182
„ cubebs	159
„ <i>Cuminum cyminum</i>	183
„ <i>Curcuma zedoaria</i> roots	154
„ cus-cus roots	148
„ <i>Cyperus rotundus</i> —Analysis of	41
„ <i>Foeniculum panmorium</i>	184
„ ginger	152
„ inchi grass	146
„ orange	178
„ <i>Zanthoxylum rhetsa</i>	175
Oil—Ginger-grass (from Baroda)	23
Oil—Kachi-grass, change on storage of	26
Oil—Marking-nut, extraction of	132
Oils, essential—Notes on some Indian	143
Oleic acid from argemone oil	37
Orange, bitter—Oil from	178
Oxidases in gums	222
Palmitic acid—Esterification constant of	89
Palmitic acid from argemone oil	37
Palmitic acid from <i>Pinus sylvestris</i>	292
Palmito-oleic acid from argemone oil	37
Pentoses from <i>Boswellia serrata</i> gum	243
β -Phenylpropionamide—Hydrolysis of	56
Phthalic anhydride—Action on hydroxycamphor of	272
Pimelic acid—Esterification constant of	89
Pinene, α - and β —from <i>Pinus sylvestris</i>	291
<i>Pinus Pumilio</i> —Hydrocarbons of	293
<i>Pinus sylvestris</i> —Hydrocarbons of	291
isopropylacetic acid—Esterification constant of	89
Proteins in gums	237

	PAGE.
Refuse—Manurial value of	251
Ricinoleic acid from argemone oil	37
Root—Calamus, oil from	149
Root—Cus-cus, oil from	147
Root—Ginger, oil from	152
Safrole from Camphor oil	174
Saponin in mohua cake	248
<i>Semecarpus anacardium</i> nuts—Constituents of	129
Sesquiterpenes from <i>Cyperus rotundus</i>	45
Stearic acid—Esterification constant of	89
Stearic acid from argemone oil	37
Suberic acid—Esterification constant of	89
Sulphur—Reaction with sodium sulphite	275
Sylvestrene—Occurrence of	287
Terpenes from kachi-grass oil	19
Δ^1 -Tetrahydrobenzoic acid—Esterification constant of	89
Δ^2 -Tetrahydrobenzoic acid—Esterification constant of	89
Thiosulphate—Rate of production of	279
Toluene—Photochemical oxidation of	7
<i>o</i> -, <i>m</i> - and <i>p</i> -Toluic acids—Esterification constants of	89
<i>s</i> -Tri- <i>p</i> -anisylbenzene	191
<i>s</i> -Tri- <i>p</i> -hydroxytriphenylbenzene	191
<i>Umbelliferae</i> fruits—Oils from	180
<i>n</i> -Valeric acid—Esterification constant of	89
<i>Vetiveria zizanoides</i> —Oil from	147
Weizmann bacillus—Vitality of	83
Xylose from <i>Boswellia serrata</i> gum	243
<i>Zanthoxylum Rhetsa</i> —Oil from	174
<i>Zingiber officinale</i> —Oil from	151
