State-of-the-art electronics in India - I

IC technology starts with Computer Aided Design

**Indigenous design
and in-depth manufacture
of Integrated Circuits**

Computer Aided Design facility for the manufacture of Linear and Digital ICs has been a major technological achievement. Funded by the Department of Electronics, Government of India this facility is an aid in the design of ICs.

BEL makes Integrated Circuits starting with Computer Aided Design, followed by Mask making, Diffusion, Assembly and Testing.

Yet ICs are just one facet of BEL's component capability.

The other well-known components that professionals all over stake the performance of their equipment

on are: Receiving Valves, Transmitting Tubes, X-ray Tubes, Cathode Ray Tubes, TV Picture Tubes,

Microwave Tubes, Germanium and Silicon Semiconductors, Hybrid Microcircuits, Passive

Components and Printed Circuit Boards — just to name a few.

BEL's contribution in fact goes far beyond the mere supply of high quality, high reliability components.

It constitutes the pioneering work done in the design and manufacture of the widest range of components and equipment conforming to JSS, MIL, BSS and DEF standards employing the latest trends and state of the art technology.

Yet BEL's most important contribution is the creation of total systems capability in electronics in India.

BEL—leaders in professional electronics
